REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The prior art does not expressly teach or render obvious the invention as recited in amended independent claims 1, 12, and 21.

With regard to independent Claim 1:

the claimed "the IPMI micro-controller and the CPU comprise a plurality of virtual controllers; and wherein each of the plurality of applications running on the CPU can independently access resources on the IPMI micro-controller via the plurality of virtual controllers", when taken in the context of the claims as a whole, was not uncovered in the prior art teachings.

With regard to independent Claim 12:

the claimed "a plurality of virtual controllers coupled with the IPMI micro-controller via the virtualizer agent; wherein the virtualizer agent accepts requests from each of the virtual controllers and forwards the requests to the IPMI micro-controller; wherein the virtualizer further accepts information received from the IPMI micro-controller and forwards the information to at least one of the plurality of virtual controllers; and wherein each of the plurality of applications is independently coupled to the IPMI micro-

controller via the plurality of virtual controllers”, when taken in the context of the claims as a whole, was not uncovered in the prior art teachings.

With regard to independent Claim 21:

the claimed “a plurality of virtual controllers coupled with the IPMI micro-controller via the virtualizer agent; wherein the virtualizer agent provides an interface to allow each of the plurality of applications to obtain a handle to a corresponding one of the plurality of virtual controllers, an interface to allow each of the plurality of applications to reserve an exclusive right for an IPMI command on a corresponding one of the plurality of virtual controllers, and an interface to allow at least one of the plurality of applications to request an asynchronous message received on the IPMI micro-controller; wherein each of the plurality of applications running on the CPU can perform a plurality of independent management tasks without any correlation between the management tasks via the plurality of virtual controllers; and wherein at least one of the plurality of applications can reserve an IPMI sequence number and wherein the IPMI sequence number is used to determine at least one of the plurality of virtual controllers intended to serve the at least one application”, when taken in the context of the claims as a whole, was not uncovered in the prior art teachings.

Dependent claims are allowed as they depend upon allowable independent claims.
